Pearls For The Abim Examinations

A migraine is a primary headache disorder characterized by recurrent headaches that are moderate to severe. Typically, the headaches affect one half of the head, are pulsating in nature, and last from two to 72 hours. Associated symptoms may include nausea, vomiting, and sensitivity to light, sound, or smell. The pain is generally made worse by physical activity. Accreditation: The University of California, San Francisco School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

Headache is a common disabling neurologic problem in all age groups, including older adults. In older adults, headache is most likely a primary disorder such as tension-type headache or migraine. However, there is a higher risk of secondary causes such as giant cell arteritis or intracranial lesions than in younger adults. Thus, based on the headache history, clinical examination, and associated symptoms, the physician may make a diagnosis.
